

## Short Specialization Course

# Developing a future for wildlife: An integrated approach to conservation

**V Edition 2023-24**  
Director: Barbara de Mori

The course aims to train professionals in the conservation and management of wildlife. Students will have the opportunity to develop an integrated approach, based on a **One Health** perspective, both theoretical and technical-practical, to wildlife management and conservation of species and their habitats. The course will develop a perspective of sustainability and management of local conflicts based on the **human dimensions** approach. The collaboration between the various participating Entities will allow participants to deepen the approach and practice to the conservation of biodiversity both in situ and ex-situ, both in the terrestrial and aquatic environment, according to an integrated approach and to the **promotion of coexistence**.

**MODULE 1** - Ecology and biodiversity – Human-Wildlife conflict and interaction – Ex-situ Conservation – In-situ Conservation — Design of a conservation project – Environmental disaster management and strandings

**MODULE 2** - One health approach and conservation medicine: an introduction – Wild animals infectious diseases management – Wildlife Welfare – Biotechnology for conservation – Forensic investigation in wildlife crimes – Evolutionary adaptation in the animal world

**MODULE 3** - Legislation; conservation ethics and education; communication; human dimension and conflict management
